

We're on the world's best assembly lines.  
Shouldn't we be on yours?

# Vibration Test Fixtures

Vibration takes its toll on everything on the PCB from solder joints to flexing cables to the board itself. These stresses must be tested in order to improve board design. Pentagon EMS can design a compact platform Vibration Test Fixture that is **specific to your application**. The fixtures provide a uniform and precise **transfer of vibration to the PCB**, and can incorporate custom hold downs to properly secure power connections, **eliminating the potential for false failures**. Their ergonomic design **reduces process setup time**.

- Customized for each application
- Compact Platform
- Precise transfer of vibration to PCB
- Custom hold downs properly secure power connections
- Eliminate potential for false failures
- Ergonomic design reduces setup time
- Usability Guarantee
- Rewards Program
